

# DEVELOPING GOLD & SILVER DEPOSITS IN MEXICO

TSX.V: SMO | OTCQB: SMOFF

[www.sonorometals.com](http://www.sonorometals.com)

**SONORO METALS CORP.** is a TSX-Venture Exchange-listed exploration and development company with a portfolio of exploration-stage precious metals properties in Sonora State, Mexico. The company has highly experienced operational and management teams with proven track records in the discovery and development of natural resource deposits.

## 500 YEARS OF GOLD/SILVER PRODUCTION

Mexico has a rich mining history dating back to the early 1500s and is among the world's largest metal producers. The country is the leading global producer of silver and a major producer of gold, copper and zinc. Sonora State is one of the most prolific mining jurisdictions in Mexico, with production of 40 million ounces of gold and 2 billion ounces of silver in the last 400 years. In 2018, Sonora was Mexico's largest producer of gold and copper with over 40 and 610 metric tonnes produced respectively. Mining accounts for nearly 21 % of total GDP for Sonora state with significant investments from foreign companies.

### Sonora State, Mexico

- Pro-Mining, Low Political Risk Jurisdiction
- Excellent Infrastructure
- Skilled Workforce
- Technical Expertise
- 500 Years of Mining History

### Projects

- Cerro Caliche Project – Cucurpe Megadistrict
- San Marcial Project – Sonora-Mojave Megashear

## FOCUSED ON SONORA

### Cerro Caliche

In 2018, Sonoro entered into option agreements to acquire 100% interests in the 1,400-hectare Cerro Caliche gold concessions strategically located between the two world-class mining districts of the Sierra Madre Gold Belt and the Sonoro-Mojave Megashear. The concessions are close to Agnico Eagle's Santa Gertrudis project, Premier Gold's Mercedes mine, and Goldgroup's Cerro Prieto mine.

In September 2018, Sonoro commenced a 10,000-meter drilling program on Cerro Caliche outlining shallow, bulk tonnage gold and silver mineralized zones with grades similar to operating heap leach mines in the region. To date, a total of 10,328 meters has been drilled and assayed with 96 drill holes for an average drill hole length of 107.6 meters, all inclined. The combination of historic and current exploration drilling now totals 23,679 meters in 212 drill holes in addition to more than 6,000 surface samples.

### San Marcial

The 100% owned San Marcial project covers over 1,000 hectares and is located 30 km southwest of Cerro Caliche and 20 km east of Magna Gold's San Francisco mine within the prolific Sonora-Mojave Megashear. The concessions surround the sites of the original mine workings of the San Marcial and Soledad mines that were active in the early 1900s. Both mine areas have yielded samples showing high-grade gold and silver mineralization, with broader low-grade zones of disseminated to stockwork forms of mineralization.
