

SONORO ANNOUNCES FINAL ASSAY RESULTS FROM 2020 DRILLING PROGRAM

VANCOUVER, Canada, January 19, 2021 – Sonoro Gold Corp. (TSXV: SGO | OTCQB: SMOFF | FRA: 23SP) (“Sonoro” or the “Company”) is pleased to report the remaining assay results from its 2020 drilling campaign at the Cerro Caliche gold project in Sonora, Mexico. The 2021 drilling program is currently underway with approximately 50 additional RC and core holes expected to be completed by the end of the first quarter. The latest assays further support the Company’s consideration of the viability for a bulk mining heap-leach development proposal with a conceptual throughput of up to 20,000 tonnes per day (tpd).

El Colorado Zone Enlarged

At the El Colorado gold mineralized zone, located in the southwestern region of the concession, four core holes were drilled to test the periphery of the zone’s intensely drilled higher grade gold shoots where drill holes announced December 18, 2020 include:

- SCR-044 intercepted 12.19 m averaging 11.22 g/t Au, including 6.09 m averaging 21.58 g/t Au
- SCD-008 intercepted 11.7 m averaging 0.92 g/t Au, including 4.55 m averaging 1.84 g/t Au

Three of the four new holes successfully tested the southeastern and northwest periphery of the higher-grade shoots:

- SCD-026 intercepted 8.4 m averaging 0.718 g/t Au
- SCD-027 intercepted 7.2 m averaging 0.601 g/t Au
- SCD-028 intercepted 6.0 m averaging 0.885 g/t Au

At the southeastern periphery, SCD-027 extended the shoots lengths by approximately 50 meters whereas at the shoot’s northern periphery, SCD-028 intercepted three different mineralized intervals. SCD-028 is located approximately 30 meters north of where previously announced drill hole SCD-016 also intercepted several mineralized intervals including 11.25 meters averaging 1.08 g/t Au. Furthermore, the SCD-028 intercepts appear to be the western splay of the adjacent Guadalupe or Cabeza Blanca vein systems. Another drill hole, SCD-025, tested the eastern edge of the higher-grade gold shoot and intercepted two short, mineralized intervals.

Guadalupe Zone

At the Guadalupe gold mineralized zone, located in the western region of the concession, scout drill hole SCD-029 intercepted 3.9 meters averaging 0.358 g/t Au, including 3.9 meters averaging 0.234 g/t Au. The drill hole investigates the northernmost area of the Guadalupe zone and is approximately 250 meters north of the previously announced SCR-030 which intercepted 22.86 meters averaging 0.725 g/t Au. Additional drill holes are planned to determine the potential for Guadalupe to increase the project’s gold mineralization.

Cabeza Blanca Zone Continues to Grow

At the Cabeza Blanca gold mineralization zone, located directly north of the El Colorado zone, core holes SCD-030 and SCD-031 confirm the zone’s extension more than 50 meters to the north:

- SCD-030 intercepted 9.3 m averaging 0.719 g/t Au
- SCD-031 intercepted 15 m averaging 0.503 g/t Au

Veta de Oro – Abejas Zone

At the southeastern end of the Veta de Oro gold mineralized zone, four core drill holes, SCD-032, SCD-033, SCD-034 and SCD-035, and two RC holes, SCR-156 and SCR-157, tested an area of vein stockwork and confirmed narrowing vein zone in the covered area between the Veta de Oro zone and the Abejas zone, located 500 meters to the south.

SCD-032 through SCD-035 were the final core drill holes of 2020 and are located directly south of drill hole SCD-015 which, as announced on December 8, 2020, intercepted 16.25 meters averaging 0.741 g/t AuEq, including 3.0 meters averaging 2.11 g/t AuEq. Management believes these drill holes establish the potential for a higher-grade zone of gold mineralization to extend to the north approximately one kilometer to El Rincon. In addition, the Company built roads and drill pads in preparation for the drilling to test the north striking zone between El Rincon and Veta de Oro. Drilling at this very high potential zone is currently under way with results expected by the end of February.

Table of Selected Core Drill Results: El Colorado, Guadalupe, and Cabeza Blanca

Cerro Caliche Project, holes composites with cutoff 0.15 Au g/t								
Hole	Target		From	To	Interval	Au	Ag	AuEq
			(meters)			g/t	g/t	g/t
SCD-025	EL COLORADO		96.15	97.00	0.85	1.100	6.90	1.199

		and	41.00	48.20	7.20	0.601	2.20	0.633
		includes	42.15	43.95	1.80	1.512	4.60	1.578
		and	91.80	93.00	1.20	2.765	3.70	2.818
SCD-028	EL COLORADO		62.00	66.80	4.80	0.507	4.40	0.570
		and	77.10	81.50	4.40	0.626	2.90	0.667
		and	118.30	124.30	6.00	0.885	5.00	0.926
SCD-029	GUADALUPE		13.00	16.90	3.90	0.358	0.40	0.363
		and	21.50	22.50	1.00	1.206	1.50	1.227
		and	29.55	33.45	3.90	0.234	1.10	0.250
SCD-030	CABEZA BLANCA		25.75	29.10	3.35	0.348	1.00	0.362
		and	38.30	40.50	2.20	1.173	0.30	1.177
		includes	38.30	39.60	1.30	1.816	0.40	1.822
		and	43.40	52.70	9.30	0.719	3.20	0.764
		includes	44.60	46.40	1.80	1.891	5.80	1.974
SCD-031	CABEZA BLANCA		14.05	20.75	6.70	0.296	0.30	0.300
		and	46.50	49.50	3.05	0.465	0.30	0.469
		and	52.10	67.10	15.00	0.503	3.00	0.546
		and	93.45	97.55	4.10	0.701	4.20	0.761

True widths in the El Colorado holes have yet to be established, while the Guadalupe intersections are considered true widths. Cabeza Blanca drill holes true widths are considered to be about 90% of reported drill length intervals.

Table of Selected Core & RC Drill Results: Veta de Oro and Abejas

Cerro Caliche Project, holes composites with cutoff 0.15 Au g/t								
Hole	Target		From	To	Interval	Au	Ag	AuEq
			(meters)			g/t	g/t	g/t
SCD-032	VETA DE ORO		106.00	112.50	6.50	0.510	6.00	0.595
		includes	107.50	108.25	0.75	1.787	11.70	1.954
SCD-033	VETA DE ORO		66.10	79.10	13.00	0.663	3.80	0.718
		and	81.60	85.30	3.70	0.421	1.50	0.442
SCD-034	VETA DE ORO		33.60	38.50	4.90	1.221	18.50	1.488
		includes	36.50	38.50	2.00	2.352	24.40	2.701
		and	47.70	54.50	6.80	0.717	17.00	0.960
		and	63.40	66.50	3.10	0.602	0.40	0.607
SCD-035	VETA DE ORO	and	62.55	75.30	12.75	0.545	1.30	0.564
SCR-156	ABEJAS		59.44	62.48	3.04	0.398	4.30	0.459
SCR-157	ABEJAS		76.20	80.77	4.57	0.603	16.00	0.833

Veta de Oro drill intersections are considered to be near true width drill intersections to reported drill length intersection lengths.

Japoneses Zone Infill Drilling

The following assay results are the final six of 33 RC holes drilled during the 2020 drill program. A total of 70 holes have been drilled within the Japoneses zone (which now includes Boluditos and Chinos NW zones) as the Company works to define the 1,300 meter long by 400 meter wide zone's shallow oxide gold mineralization. These holes are intended to infill gaps in the drill pattern. Selected RC drill hole Intercepts from the Japoneses mineralized zone include SCR-151 with 27 meters averaging 0.694 g/t Au which is a wide addition to the zone's near surface mineralization. A high-grade vein with a width of 3.05 meters averaging 3.355 g/t Au, which was intercepted within the 27-meter interval, is interpreted to be a section of the main Japoneses vein. Intersections in the Japoneses zone appear to have true widths approximately 15 percent less than reported as drill length intersections.

Table of Selected RC Drill Results: Japoneses

Mel Herdrick, Sonoro's VP of Exploration, commented, "The focused drill program of 2020 was very successful in further outlining additional gold mineralization, part of which contains significantly higher gold grades. We have a substantial amount of additional drilling planned to fully define the project's considerable potential. Our plan is to drill up to 50 more holes as part of this effort by the end of March of this year, which we expect will be in time to contribute further to the updated resource estimate to be prepared by Micon International."

Kenneth MacLeod, Sonoro's President and CEO, added, "I am very happy to report at the conclusion of the 2020 drilling program that the program's goals, as they relate to the overall development of production at Cerro Caliche, have been achieved and that the entire campaign to begin gold production at Cerro Caliche remains on track."

John Darch, Sonoro's Chairman, stated, *"From the outset, our pledge to shareholders has been to begin producing gold at Cerro Caliche as quickly as was reasonably achievable. Our overall objective was, and continues to be, to generate free cash flow to be used to explore and define Cerro Caliche's considerably larger mineralized potential, thereby shaping the Company's future growth plans. This way we hope to minimize the need to issue additional shares and, thereby, avoid diluting our existing shareholders' interests in the Company, as we fund future exploration and development."*

Quality Assurance/Quality Control ("QA/QC") Measures and Analytical Procedures

Drill samples are collected with an airstream cyclone and passed into a splitter that divides each sample into quarters. The quartered samples are then bagged and sealed with identification. The sample group has blanks, standards and duplicates inserted into the sample stream.

Bureau Veritas (BV) collects the samples and transports them directly to the preparation laboratory in Hermosillo, Sonora. At the laboratory, part of each sample is reduced through crushing, splitting and pulverization. About 200 grams are sent by BV to their Vancouver, Canada laboratory and dissolved in aqua regia for multi-element ICP analysis, including silver. Of these samples, 30 grams undergo fire assay in Hermosillo for gold by reducing the fire assay to a concentrated button of material that is dissolved in acids and the gold content determined by atomic absorption.

No QA/QC issues were noted with the results received from the laboratory.

Geologic Description

Cerro Caliche is located 45 kilometers east southeast of Magdalena de Kino in the Cucurpe-Sonora Mega-district of Sonora, Mexico. Multiple historic underground mines were developed in the concession including Cabeza Blanca, Los Cuervos, Japoneses, Las Abejas, Boluditos, El Colorado, Veta de Oro and Espanola. Mineralization types of the Cucurpe-Sonora Mega-district include variants of epithermal low sulfidation veins and related mineralized dikes and associated volcanic domes. Local altered felsic dikes cut the mineralized meta-sedimentary rock units and may be associated with mineralization both in the dikes and meta-sedimentary rocks.

Host rocks include Jurassic-Cretaceous meta-sedimentary rock units including argillite, shale, quartzite, limestone, quartz pebble conglomerate and andesite. Younger intrusive rock consisting of medium coarse-grained granodiorite-granite is present in the westerly parts of the concessions near the historic Cabeza Blanca Mine. It is apparent that veining cuts and pervasively alters the intrusive stock. Rhyolite occurs in irregular bodies distributed in higher elevations in the northerly part of the concession, including the Rincon area, where it occurs as flows, sills, dikes and rhyolite domes. Part of the rhyolite is mineralized and appears to be related to epithermal gold mineralization throughout the property.

Qualified Person Statement

Stephen Kenwood, P.Geo., a Director of Sonoro, is a Qualified Person within the context of National Instrument 43-101 (NI 43-101) and has read and approved this news release. Readers are cautioned that the presence of mineralization on historic mines adjacent to or on Cerro Caliche is not necessarily indicative of gold mineralization in the concessions held by the Company.

About Sonoro Gold Corp.

Sonoro Gold Corp. is a publicly listed exploration and development company with a portfolio of exploration-stage precious metal properties in Sonora State, Mexico. The Company has highly experienced operational and management teams with proven track records for the discovery and development of natural resource deposits.

On behalf of the Board of Sonoro Gold Corp.

Forward-Looking Statement Cautions: *This press release contains certain "forward-looking statements" within the meaning of Canadian securities legislation, relating to, among other things, the Company's plans for the exploration, development and operations at the above-described Cerro Caliche Concessions, located in the municipality of Cucurpe, Sonora, Mexico, including statements regarding the Company's plans for additional drilling, an anticipated update of the current resource estimate for Cerro Caliche, the Company's plans for a proposed 20,000 tonne per day HLMO, including the potential for revenue-positive operations, the hope for results of continued exploration drilling, including to test high-grade targets, and other material conditions set out above on which the Company's development plans are dependent. Although the Company believes that such statements are reasonable based on current circumstances, it can give no assurance that such expectations will prove to be correct. Forward-looking statements are statements that are not historical facts; they are generally, but not always, identified by the words "expects", "plans", "anticipates", "believes", "intends", "estimates", "projects", "aims", "potential", "goal", "objective", "prospective" and similar expressions, or that events or conditions "will", "would", "may", "can", "could" or "should" occur, or are those statements, which, by their nature, refer to future events. The Company cautions that forward-looking statements are based on the beliefs, estimates and opinions of the Company's management on the date the statements are made and they involve a number of risks and uncertainties, including the possibility of unfavourable exploration and test results, unfavourable results of the contemplated PEA of the Cerro Caliche project, the lack of sufficient future financing to carry out exploration and development plans and unanticipated changes in the legal, regulatory and permitting requirements for the Company's exploration programs. There can be no assurance that such statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements. The Company disclaims any intention or obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise, except as required by law or the policies of the TSX Venture Exchange. Readers are encouraged to review the Company's complete public disclosure record on SEDAR at www.sedar.com.*

Neither the TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) accept responsibility for the adequacy or accuracy of this release.
